

The **complete** guide to IMS

A clear, step-by-step reference to everything the Studio Lotus IT Inventory Management System does — with real screenshots of the live system, covering every module and every role.

 Read start-to-finish or jump around

 Real screenshots of the live system

 Role-by-role

 Print / save as PDF anytime

 **How to read this guide.** Coloured boxes mean:  **Tip** a shortcut,  **Careful** something to double-check,  **Good to know** background. Each module also shows a “**Who can do this**” line so you always know if it’s for you. Click any screenshot to enlarge it.

THE BIG PICTURE

What is IMS, in one breath?

IMS is Studio Lotus’ single home for **every piece of IT kit the studio owns** — laptops, monitors, servers, printers, software licences, cables and paper — plus who has it, what it cost, when its warranty ends, and what it needs next.

Every item, one tag

Each device gets an automatic tag like **SL-LAP-2026-0001** and a QR sticker. Scan it to find anything in seconds.

Who has what

Hand a laptop to a colleague (“check out”), take it back (“check in”). Every handover is logged forever.

Nothing slips

Warranties expiring, licences renewing, stock running low, repairs overdue — IMS warns you before it hurts.

Money in view

Book value, yearly spend, budget vs actual and a 5-year hardware/software forecast — all calculated for you.

Full life story

Purchase → in use → repair → retirement. Each asset carries its own history and invoices.

Answers, not spreadsheets

Dashboards and reports replace the old “which sheet was that in?” hunt.

You don't need to be “technical.” IMS was built to be obvious. Pick a module from the left, follow the numbered steps, done. This guide never assumes you've seen it before.

ORIENTATION

The 5-minute tour

You reach IMS in your browser, sign in with your Studio Lotus Google account, and land on a

screen that always looks the same. Learn these three areas once and every page makes sense.

Step 1 · Sign in

The login screen. Click “**Sign in with Google**” and choose your **@studiolotus.in** account. No new password to remember — it’s the same account as your email.

Only studiolotus.in accounts work. A personal Gmail will be turned away. If you’re signed into several Google accounts, pick the work one.

Step 2 · Learn the screen

Every page has the same frame. ① the **left sidebar** is your menu · ② the **top bar** has the scan box and your name/role · ③ the big area in the middle is the page you're on.

①

Left sidebar

Your list of modules — Dashboard, Assets, Allotments and so on. What you see here depends on your role. An **Admin** group appears only for managers and admins.

②

Top bar

The **Scan tag / serial** box (type or scan a code and hit Enter to jump straight to that item) and, on the right, **your name and role** with a Sign-out button.

③

Main area

The working area. Lists have a search bar and filters; forms have friendly labels; most actions are one orange button away.

The scan box is everywhere. A cheap USB barcode scanner “types” the code for you and presses Enter — IMS opens that exact asset. No scanner? Just type the tag or serial and press Enter.

PERMISSIONS

Who can do what

IMS gives each person exactly the buttons they need — no more. Your **role** (shown next to your name, top-right) decides what you can see and change. Here are the six roles, from most to least powerful.

● Super Admin

Runs the whole platform

Studio Lotus platform owners

- Everything below, across **all** Studio Lotus apps
- Manage people & access levels
- The only role that sees **User management**

● IMS Admin

Owns IMS end-to-end

Head of IT

- All inventory actions + **delete** assets
- Set **budgets** and financial settings
- Manage master data (categories, vendors...)

● IMS Manager

Day-to-day owner

IT lead / office manager

- Everything an Operator can do
- Edit **master data** & see **Finance / Reports**
- Can't delete assets or manage platform users

● IMS Operator

Hands-on the kit

IT support staff

- Add & edit assets, print labels
- Check out / in, transfers, repairs
- Record purchases, licence seats, stock

● IMS Viewer

Look, don't touch

Finance/ops who need visibility

- Browse assets, dashboard & alerts
- Export lists to CSV
- Cannot change anything

● Employee

Just "My Assets"

Everyone at the studio

- See the kit issued to **you**
- Acknowledge a handover
- Nothing else in IMS

i Roles stack. Each role can do everything the one below it can, plus a little more: ● Employee

→ ● Viewer → ● Operator → ● Manager → ● Admin → ● Super Admin .

Manager

Gains an **Admin** ► **IMS settings** entry, but not **User management** — that stays with Super Admin.

★ **Can't see a button this guide mentions?** It's almost always your role. Ask IT to bump your access, or hand the task to someone who has it.

THE BASICS BEHIND EVERYTHING

Asset tags & the life of an asset

Two ideas power the whole system: every asset gets a **smart tag**, and every asset moves through a simple set of **statuses**. Understand these and nothing else will surprise you.

Anatomy of an asset tag

💡 **You never type a tag.** IMS builds the next one automatically the moment you pick a category. It can't clash and you can't fat-finger it. Each category has its own code — **LAP** laptop, **MON** monitor, **SRV** server, and so on.

The life of an asset (its “status”)

A brand-new device starts **In stock**. Give it to someone → **Assigned**. Take it back → **In stock**. Something breaks → **In repair** → back to stock (or its owner). When it's written off → **Retired** or **Lost**. IMS moves the status for you as you use each module.

THE MODULES, ONE BY ONE

Every screen, explained

Below is every module in the sidebar. Each has a real screenshot, a “who can do this” line, and

numbered steps. Sections are collapsible — click a heading to open or close it.

1 Dashboard

the morning glance

Your home page. One look tells you how healthy the estate is: how many assets, what they're worth, how many are out with people, what's in repair, this year's spend, and anything that needs attention.

Who can do this: ● **Viewer** and everyone above. Read-only for all.

Top row: the key numbers (KPIs). **Below:** assets **By status**, the **Category mix**, and a **Needs attention** list pulled from Alerts.

💡 **Read it left-to-right, top-to-bottom.** Numbers first, then the bars show the shape of your estate, then the amber/red list tells you what to act on today. Hit **Refresh** for the latest.

Every asset with its tag, model, category, status, who holds it, warranty state and current book value.

1 Search

Type a tag, serial, model or a person's name in the search box — the list filters instantly.

2 Filter

Narrow by **category** (Laptop, Monitor...) or **status** (In stock, Assigned, In repair...) with the two dropdowns.

3 Scan to jump

Point a scanner at a QR/barcode (or type the code) in the top **Scan** box and press Enter — IMS opens that exact asset.

4 Open an item

Click any row to see its full detail page.

5

Export

Click **CSV** to download exactly what's on screen (filters included) for Excel or Finance.

The green/red pills in **Warranty** mean **In warranty** or **Expired** — worked out automatically from the purchase date.

3

Add an asset

the guided wizard

Register a new device in under a minute. The form is split into three friendly parts and fills in as much as it can for you.

Who can do this: ● **Operator** and above.

Three steps — **1 What is it?** · **2 Condition** · **3 Purchase**. The tag and warranty fill themselves in.

1

Pick the category

Choose e.g. **Laptop**. The **Auto asset tag** appears at once — you can't mistype it.

2

Pick the model (optional)

If the model is in the catalogue, choose it and the maker, specs and warranty length auto-fill. Not there? Type the model name.

3

Scan / type the serial

Scan the device's barcode into the **Serial number** box, or type it.

4

Condition & location

Set condition (New, Good...) and where it lives.

5

Purchase details

Vendor, cost and purchase date. From the date, IMS auto-calculates **warranty end** and **depreciation**.

6

Save

Hit **Save asset**. You land on its detail page with a ready-to-print QR label.

Fill in cost + date. They power warranty alerts, book value and the finance charts. An asset with them missing shows up as a "data gap" alert.

4

Asset detail & QR label

one item, full story

Everything about a single asset on one page: overview, financials & warranty, and a scannable label.

View: ● **Viewer** + · **Edit:** ● **Operator** + · **Delete:** ● **Admin** +

SL-LAP-2026-0006
Lenovo ThinkPad X1 Carbon G11 · Laptop

ASSIGNED

Edit

OVERVIEW	
Category	Laptop
Manufacturer	Lenovo
Model	ThinkPad X1 Carbon G11
Serial number	LTP-X1C-4418
Condition	NEW
Location	Studio Floor - Design
Assigned to	Priya Nair

FINANCIALS & WARRANTY	
Purchase cost	₹1,58,000
Current book value	₹1,53,999
Age	0.1 yr
Useful life	4 yr
Purchase date	2026-06-02
Vendor	Rashi Peripherals Ltd
Warranty	2029-06-02 · 1059d left

LABEL · QR

SL-LAP-2026-0006
Scan this to pull up the asset instantly.
Print sticks a scannable label — tag, serial & QR — ready for a label printer or A4 sheet.

Print label

Overview (what & who), **Financials & warranty** (cost, book value, age, warranty countdown) and a **QR label** you can print.

1

Read the two cards

Left = what it is and who has it. Right = money and warranty, including days left.

2

Edit

• **Operator** + — click **Edit** to fix any field (status, condition, location, cost...).

3

Print the label

Click **Print label** for a sticker with the tag, serial and QR — ready for a label printer or A4 sheet.

4

Delete

• **Admin** only — the red bin removes an asset (it's hidden, not truly erased, so history is safe).

Deleting is rare. A device that's dead or sold should usually be **Retired** (via Edit ► status), not deleted — that keeps it in the records and the money history intact.

5 Allotments — issue & return

who has what

Hand kit to people and take it back, with a permanent handover trail. “Check out” = give; “Check in” = return.

Who can do this: **Operator** + View history: **Viewer** +

The screenshot displays the Studio Lotus IMS Allotments interface. The sidebar on the left contains navigation links: Dashboard, Assets, Allotments, Repairs, Purchases, Licenses, Consumables, Finance, Reports, Alerts, My Assets, ADMIN, User management, and IMS settings. The main content area is titled 'Allotments' and includes a 'CHECK OUT AN ASSET' form, a 'CURRENTLY HELD (8)' table, and a 'HANDOVER HISTORY' table.

CURRENTLY HELD (8)

ASSET	HELD BY	MODEL	
SL-MON-2026-0002	Priya Nair	UltraSharp U2723QE 27" 4K	Check in
SL-DES-2026-0003	Sneha Iyer	iMac 24" M3	Check in
SL-DES-2026-0001	Rohan Gupta	Precision 3660 Tower	Check in
SL-LAP-2026-0006	Priya Nair	ThinkPad X1 Carbon G11	Check in
SL-LAP-2026-0005	Ananya Desai	Latitude 5440	Check in
SL-LAP-2026-0004	Aarav Sharma	Latitude 5440	Check in
SL-LAP-2026-0003	Vikram Rao	MacBook Pro 14" M3 Pro	Check in
SL-LAP-2026-0002	Aarav Sharma	MacBook Pro 14" M3 Pro	Check in

HANDOVER HISTORY

ASSET	ACTION	PERSON	WHEN	ACK
-------	--------	--------	------	-----

Left: the **Check out** form. Right: everything **currently held**, each with a one-click **Check in**. Below: full handover history.

1 Check out

Pick an available asset, search the staff directory for the person, optionally set a location and note, then **Check out**. The asset flips to **Assigned**.

2 Check in

In **Currently held**, click **Check in** next to the returned item. It goes back to **In stock**.

3 Transfer

Moving kit between people or sites is logged too — from an asset you can re-assign without a full return.

Trace it

Only “In stock” items can be checked out. If a laptop is already Assigned or In repair, check it in / return it first.

Repairs

send out, bring back

Track anything that goes out for service: the fault, the vendor, expected return, and the final cost when it's back.

Who can do this: **Operator** + **View:** **Viewer** +

REPORTED FAULT *

SERVICE VENDOR

EXPECTED RETURN

EST. COST (₹)

☐ Covered under warranty

NOTES

Open repair

REPAIR QUEUE · 2 OPEN

ASSET	FAULT	VENDOR	STATUS	COVER	COST	
SL-LAP-2026-0007	Battery swollen...	TechFix Services	RETURNED	PAID	₹8,500	
SL-PRN-2026-0002	Paper feed roller...	TechFix Services	SENT	PAID	₹4,500	
SL-DES-2026-0002	GPU artefacts +...	TechFix Services	SENT	OVERDUE	PAID	₹18,000

Left: **Send for repair**. Right: the **repair queue** with status, warranty cover, cost and a **Mark returned** button. Overdue jobs are flagged red.

1

Send it out

Pick the asset, describe the fault, choose the service vendor, set an expected return date and (if known) an estimate. Save — the asset becomes **In repair**.

2

Watch the queue

Open repairs sit at the top. Anything past its expected date gets an **Overdue** flag (and an alert).

3

Mark returned

When it's back, click **Mark returned**, choose the outcome (Repaired, Replaced, Beyond repair...), enter the final cost and new condition. The asset returns to stock or its owner.

Final cost feeds Finance. Repair costs show up in the cost ledger and this year's spend automatically.

7

Purchases

bills & invoices

Record what you bought and file the invoice straight to the shared Google Drive — no more lost PDFs.

Who can do this:

● Operator

+

View:

● Viewer

+

Left: **Record a bill** (vendor, invoice no., date, total, optional link to an asset). Right: **purchase history** with an **Attach** button for the invoice file.

Fill in vendor, invoice number, date and total. Optionally link it to the asset it paid for. Save.

Click **Attach** on the row and pick the PDF/photo. IMS uploads it to Google Drive and links it — click **View on Drive** anytime.

Link the bill to its asset. That stamps the cost and date onto the asset so its book value and warranty stay correct.

software & seats

Who can do this:  **Operator** + (add & assign seats) · **View:**  **Viewer** +

Things you count rather than tag — paper, toner, cables, spare mice. Track how much is on hand and get warned before you run out.

Who can do this: ● **Operator** + · View: ● **Viewer** +

-

+ Add item

STOCK LEVELS

ITEM	ON HAND	MIN	LOCATION	STOCK	
A4 Paper (Ream) Consumable / Misc	4 ream	10	IT Store Room	LOW	Receive / issue
HP 30A Toner Cartridge Consumable / Misc	10 pcs	3	IT Store Room	OK	Receive / issue
USB-C to HDMI Adapter Cable / Adapter	2 pcs	5	IT Store Room	LOW	Receive / issue
Wireless Mouse (spare) Mouse	12 pcs	4	IT Store Room	OK	Receive / issue

Stock levels with on-hand quantity, minimum level, location and an **OK / LOW** flag. Add items on the left; adjust stock on the right.

1

Add an item

Name it, set the unit (pcs, ream...), starting quantity and a **minimum level** (the point below which it's "low").

2

Receive or issue

Click **Receive / issue** and choose **IN** (stock arrived), **OUT** (handed out) or **Adjust** (stock-take), with a quantity.

3

Watch the flag

Drop to or below the minimum and it turns **LOW** and raises a low-stock alert.

This year's spend, budget vs actual, a full cost ledger, and a five-year hardware-vs-software forecast.

Who can do this: **Manager** + Set budgets: **Admin** +

1 Read the four tiles

FY spend, budget, variance (green = under budget) and next-year forecast.

2 See where money goes

Spend by type splits purchases, licence renewals and repairs. The **5-year projection** predicts refresh & renewal costs (orange = hardware, blue = software).

3 Export

Export CSV hands the whole cost ledger to Finance.

i You don't enter these numbers — IMS calculates them from your assets, purchases, licences and repairs. Keep those tidy and Finance is always right.

11 Reports

deeper cuts

Ready-made breakdowns: warranty health, spend by category, allotment activity, and licence/stock summaries.

Who can do this: **Manager** +

Panels for **warranty health**, **spend by category**, **allotment** activity and **licences & stock** — a quick management read-out.

💡 Use Reports for the “how are we doing overall?” questions; use Assets + CSV when you need the row-by-row detail.

12 Alerts

before it bites

Your to-do list, generated automatically. Four kinds: warranty expiring, licence renewing, stock low, repair overdue — plus “data gaps” where an asset is missing key info.

Who can do this: ● **Viewer** +

The screenshot shows the Studio Lotus Alerts page. The page has a sidebar with navigation links: Dashboard, Assets, Allotments, Repairs, Purchases, Licenses, Consumables, Finance, Reports, Alerts, My Assets, ADMIN, User management, and IMS settings. The main content area displays a list of alerts. The alerts are categorized into 'HIGH PRIORITY' (red) and 'EVERYTHING ELSE' (amber/grey). The alerts include: Adobe Creative Cloud (Teams) renewal due, A4 Paper (Ream) is below minimum stock, USB-C to HDMI Adapter is below minimum stock, Repair #1 is overdue, SL-LAP-2026-0003 warranty expires, SL-MON-2026-0001 warranty expires, SL-MOU-2026-0001 has incomplete inventory data, and SL-KBD-2026-0001 has incomplete inventory data.

Split into **High priority** (red) and **Everything else** (amber/grey). Each line says what it is and when it's due.

Work the red list first. High-priority means money or downtime is at stake soon — a renewal about to auto-charge, a repair past due, stock at zero.

13 My Assets

for every employee

The one page every colleague can use — a simple list of the kit currently issued to **you**.

Who can do this: ● **Every employee** (and everyone above).

The screenshot displays the 'My Assets' section of the Studio Lotus IMS. The page title is '/it/my-assets'. The sidebar on the left lists various navigation options under 'INVENTORY · IMS' and 'ADMIN'. The main content area shows a table of assets issued to the user, with columns for TAG, MODEL, CATEGORY, CONDITION, and LOCATION. Two assets are listed: an Apple MacBook Pro 14" M3 Pro and a Dell Latitude 5440. The user is logged in as 'Aarav superadmin'.

TAG	MODEL	CATEGORY	CONDITION	LOCATION
SL-LAP-2026-0002	Apple MacBook Pro 14" M3 Pro	Laptop	NEW	Studio Floor - Design
SL-LAP-2026-0004	Dell Latitude 5440	Laptop	GOOD	Studio Floor - Design

Everything issued to you — tag, model, category, condition and where it lives. Click a row for its full detail.

i Something wrong? If a device you have isn't listed (or one you returned still shows), tell IT — they'll correct the handover in Allotments.

14 Admin · User management

people & access

Where the platform owner sees who can get in and at what level. Shared across all Studio Lotus apps, not just IMS.

Who can do this: ● **Super Admin** only.

Need more access? This is the page a Super Admin uses to grant it. Everyone else should just ask them.

the autofill engine

Who can do this: **Manager** +

- **Categories** — each has a tag code (LAP, MON...), default warranty months and useful life used for tags, warranty & depreciation.
- **Manufacturers & Vendors** — the makers and the shops you buy/service through.
- **Locations** — offices, floors, rooms and stores.
- **Products** — the catalogue of specific models. Add a model once and every future asset of it auto-fills.

★ **Best-practice.** Add a product to the catalogue the first time you buy a model. From then on, adding those assets is: pick category → pick model → scan serial → save.

PUT IT TOGETHER

Everyday recipes

The handful of routines you'll actually repeat — as simple step chains across the modules you

just met.

New joiner gets a laptop

Someone leaves

A device breaks

New kit arrives

TERMS & DEFINITIONS

Glossary

TERM	WHAT IT MEANS
Asset	Any single tracked device — a laptop, monitor, server, printer, UPS, etc.
Asset tag	The auto-generated ID like SL-LAP-2026-0001 printed on the label. Never changes.
Status	IN STOCK on the shelf · ASSIGNED someone has it · IN REPAIR out for service · RETIRED / LOST end of life.

TERM	WHAT IT MEANS
Condition	Physical state: New, Good, Fair, Poor, Damaged.
Check out / in	Giving an asset to a person (out) and taking it back (in). Both are logged.
Book value	What the asset is “worth” today after depreciation — cost minus wear over its useful life.
Warranty status	In warranty or Expired , worked out from purchase date + the category’s warranty months.
Seat (licence)	One person’s slot on a software subscription. 25 seats = up to 25 people.
Consumable	Bulk stock counted by quantity (paper, toner, cables), not individually tagged.
Data gap	An alert that an asset is missing key info (serial, cost or date) — fill it in to clear it.
Financial year (FY)	Runs April→March . FY 2026 = Apr 2026 to Mar 2027. Used in tags and finance.
Master data	The background lists (categories, vendors, products...) that make autofill work.

WHEN SOMETHING’S ODD

FAQ & quick fixes

“It won’t let me sign in”

Use your **@studiolotus.in** Google account, not a personal one. Signed into several? Pick the work account on the Google screen.

“I can’t see Finance / an Admin menu”

That’s your role. Finance & Reports need

● **Manager**

; User management is

● **Super Admin**

. Ask IT to adjust your access.

“The button I need is greyed out or missing”

Same reason — role. Hand the task to someone with the right level, or request an upgrade.

“I can’t check out a laptop”

It’s probably already **Assigned** or **In repair**.

Only **In stock** items can be checked out — return it first.

“My Assets shows the wrong kit”

Handover records are off. Ask IT to check it in / out correctly in **Allotments**.

“The finance numbers look wrong”

They’re calculated from assets, purchases & repairs. A missing cost/date is usually the cause — look for **data-gap** alerts and fill them in.

“I got a warranty / renewal alert”

That’s IMS doing its job — act before the date. Renew the licence, or plan the replacement.

“Do I have to type the tag?”

Never. Tags are generated automatically; you only ever **scan or click** them.

KEEP THIS HANDY

One-page quick reference

I want to...

Find a device	Scan its QR, or search in Assets
Register new kit	Assets ▶ Add asset
Give kit to someone	Allotments ▶ Check out
Take kit back	Allotments ▶ Check in
Send for repair	Repairs ▶ Send for repair
File an invoice	Purchases ▶ Attach
Add software / seats	Licenses
Check my own kit	My Assets

Remember

- Sign in with your **@studiolotus.in** Google account.
- Your **role** (top-right) decides what you can do.
- **Tags are automatic** — never typed.
- Only **In-stock** items can be checked out.
- **Retire**, don’t delete, dead assets.
- Fill in **cost & date** so money & warranty stay right.
- Work the **red alerts** first.
- Stuck? It’s usually your **access level** — ask IT.
